

Admin Navigation & Component Working Guide

A complete technical & functional blueprint detailing how every module in the KAIA Admin Console operates, its REST API integration points, data structures, and administrative capabilities.

OVERVIEW

MISSION CONTROL & REAL-TIME TELEMETRY

■ Dashboard

</admin/dashboard>

High-altitude central operational cockpit. Consolidates mission-critical business KPIs including Gross Merchandise Value (GMV), net platform earnings, total registered customers, active delivery centers, low-stock alerts, and live graphical trendlines across selectable 7-day, 30-day, and 90-day windows.

Core Data Inputs: Aggregated stats from Orders, Users, Products, DeliveryLocations, and Payouts.

Admin Capabilities: Manual metric refresh, dynamic time-frame switching, direct jump to operational bottlenecks.

■ Analytics

</admin/analytics>

Advanced business intelligence and behavioral data suite. Analyzes customer acquisition velocities, conversion funnel performance, cart abandonment rates, category revenue density, and geographical demand heatmaps across Indian postal districts.

Core Data Inputs: Checkout telemetry, DeliveryCheckLog coordinates, product view counts, session logs.

Admin Capabilities: Export CSV/PDF business intelligence reports, filter by product brand, multi-quarter sales trajectory analysis.

■ All Orders

</admin/orders>

Global multi-vendor order ledger. Provides comprehensive lifecycle tracking for all customer purchases (Pending → Confirmed → Processing → Dispatched → Delivered → Cancelled). Features live order filtering, buyer detail inspection, and automated tax invoice generation.

Core Data Inputs: Order document ID, buyer shipping address, item SKU array, Razorpay payment tokens.

Admin Capabilities: Manual status override, trigger dispatch notifications, download GST-compliant tax invoices.

■ Delivery Management (10 KM)

</admin/delivery-locations>

Geospatial delivery center and service hub orchestrator. Allows configuring authorized fulfillment centers across Delhi NCR, Bangalore, Mumbai, and all Indian cities. Automatically calculates 10 KM delivery radius using the Haversine mathematical spherical formula to qualify customer orders.

Core Data Inputs: Location Name, Full Address, 6-digit PIN code, Latitude/Longitude GPS, Delivery Radius (KM).

Admin Capabilities: Add multiple delivery addresses, auto-resolve GPS coords from PIN code, toggle active/inactive hubs.

■ Shipments & Logistics

</admin/shipments>

Third-party courier and fleet coordination console. Tracks automated Air Waybill (AWB) numbers with integrated logistics partners (Delhivery, BlueDart, Ecom Express), transit checkpoints, dispatch manifests, and delivery SLAs.

Core Data Inputs: Shipment tracking AWB, Courier Partner Name, Package weight/dimensions, destination PIN.

Admin Capabilities: Re-assign couriers, trigger tracking sync webhooks, print courier shipping labels and manifests.

■ Warehouse Inventory

</admin/inventory>

Real-time stock balance monitor across multi-brand catalogs. Tracks on-hand inventory, reserved active carts, and warehouse transit batches while triggering automatic replenishment alerts when quantities drop below safe minimums.

Core Data Inputs: Product SKU, warehouse bin location, on-hand count, reserved count, restock thresholds.

Admin Capabilities: Direct stock balance adjustments, audit inventory discrepancies, bulk restock allocation.

■ Physical Serials

</admin/serials>

Hardware and electronics serial number registry. Maps manufactured individual units to their unique serial/IMEI codes, customer purchase records, and warranty timelines for anti-counterfeiting and authorized service tracking.

Core Data Inputs: Product ID, Unique Serial Number, Manufacturing Batch ID, Warranty Expiry Date.

Admin Capabilities: Batch serial barcode scanning, warranty claim validation, blacklist defective/lost units.

■ RMA / Returns

</admin/returns>

Return Merchandise Authorization (RMA) workflow engine. Manages customer return/exchange requests, reverse courier pickup dispatch, warehouse Quality Check (QC) inspection logs, and automated refund or replacement fulfillment.

Core Data Inputs: Return reason code, customer defect proof photos, QC inspection checklist, Order ID.

Admin Capabilities: Approve/Reject return authorization, schedule reverse pickup, release customer refunds.

■ All Products

</admin/products>

Marketplace master product catalog. Allows global search, filtering by brand or category, live price adjustments, visibility status toggles, and catalog compliance moderation for all items sold on the storefront.

Core Data Inputs: Product Title, SKU, Brand ID, Category, MRP, Selling Price, Discount %, Stock Level.

Admin Capabilities: Toggle featured product status, edit technical specifications, bulk price updates, unpublish items.

■ Add Product (NEW)

</admin/products/add>

Full-featured product publishing studio. Multi-step publishing wizard for uploading high-res product galleries via Cloudinary, setting GST HSN codes, defining technical specification key-value pairs, and configuring product variants.

Core Data Inputs: Image URLs, title, rich HTML description, brand attribution, category, variants, warranty.

Admin Capabilities: Instant catalog publishing, assign brand ownership, configure tiered pricing and discounts.

■ Categories

</admin/categories>

Hierarchical catalog taxonomy builder. Manages parent departments, nested subcategories, SEO slug URLs, category banner assets, and category-level GST tax rate classifications.

Core Data Inputs: Category Name, Parent Category ID, Slug URL, Icon class, Banner Image, GST Tax %.

Admin Capabilities: Reorder category tree, create new taxonomy branches, toggle visibility on storefront navigation.

■ Brands & Sellers

</admin/brands>

Brand partner & merchant governance console. Handles vendor onboarding, verification of Business PAN and GSTIN certificates, bank account payout verification, and customized platform commission agreements.

Core Data Inputs: Brand Legal Name, GSTIN, Registered Vendor User ID, Logo URL, Bank Payout Details.

Admin Capabilities: Grant verified brand badge, suspend non-compliant seller storefronts, configure custom take-rates.

FINANCE & PAYMENTS

ACCOUNTING, LEDGER & SETTLEMENTS

■ Payment Ledger

</admin/payments>

Transaction-level financial audit book. Tracks every payment gateway capture (Razorpay, UPI, Credit/Debit Cards, Netbanking, COD), gateway processing fees, failure logs, and reconciliation statuses.

Core Data Inputs: Gateway Transaction ID, Order Reference, Amount Paid, Currency (INR), Payment Method.

Admin Capabilities: Audit daily gateway reconciliation, verify disputed transactions, trigger manual refunds.

■ Revenue Analytics

</admin/revenue>

Platform profitability and margin analyzer. Breaks down Gross Merchandise Value (GMV), net marketplace commission retained, statutory tax deductions (TCS/TDS), and seller payable reserves.

Core Data Inputs: Delivered order totals, platform commission rates, payment gateway charges.

Admin Capabilities: Compare multi-brand GMV contributions, forecast revenue, generate financial quarterly charts.

■ Seller Settlements

</admin/settlements>

Vendor payout computation engine. Computes net payable amounts to brand partners after deducting marketplace commissions and returns, creating structured payout batches for bank NEFT/RTGS disbursements.

Core Data Inputs: Brand ID, eligible delivered order balances, payout bank account, settlement reference.

Admin Capabilities: Generate weekly settlement batches, record bank UTR transfer numbers, download payout sheets.

■ Commission Rules

</admin/commissions>

Dynamic marketplace monetization engine. Defines platform take-rates (percentage and fixed fees) based on product category, seller tier, or volume threshold overrides.

Core Data Inputs: Category ID, Brand Tier, Commission %, Minimum Fixed Transaction Fee (■).

Admin Capabilities: Create dynamic take-rate rules, configure promotional zero-commission campaigns.

MARKETING & REVIEWS

PROMOTIONS & SOCIAL PROOF

■ Discount Coupons

</admin/coupons>

Promotional voucher management studio. Creates coupon codes with configurable discount logic (percentage vs flat cash off, minimum order requirements, maximum discount caps, per-user usage limits, and expiration dates).

Core Data Inputs: Coupon Code, Discount Type, Discount Value, Min Order Value, Expiry Date, Total Usage Limit.

Admin Capabilities: Activate/deactivate voucher codes, inspect coupon usage analytics, restrict to first-time buyers.

■ Promotions

</admin/promotions>

Homepage marketing asset and flash sale manager. Controls hero carousel banner graphics, countdown timers, featured brand spotlight grids, and seasonal sale ribbons on the customer storefront.

Core Data Inputs: Desktop & Mobile Banner URLs, redirect target URLs, promotional start/end dates, display order.

Admin Capabilities: Schedule festival sales, reorder banner slides, preview mobile responsive layouts.

■ Customer Reviews

</admin/reviews>

Social proof and product review moderation center. Displays customer feedback, 1-to-5 star ratings, and uploaded buyer photos with verified purchaser verification and spam filtering.

Core Data Inputs: Product ID, User ID, Star Rating (1-5), Review Text, Uploaded Image URLs, Moderation Status.

Admin Capabilities: Approve or hide reviews, filter spam/inappropriate content, pin helpful customer reviews.

SUPPORT & USERS

IDENTITY, RBAC & CUSTOMER CARE

■ Accounts & Users

</admin/users>

Master identity and Role-Based Access Control (RBAC) directory. Oversees all customer, brand vendor, and administrator profiles. Enables inspecting order histories, saved addresses, verification flags, and suspension controls.

Core Data Inputs: Name, Email, Phone, Role (ADMIN/BRAND/CUSTOMER), Auth Provider (Clerk/Local), Account Status.

Admin Capabilities: Promote/demote user roles, suspend fraudulent accounts, manual email verification overrides.

■ Support Tickets

</admin/support>

Customer service helpdesk system. Organizes support tickets by department (Billing, Logistics, Defective Items, Account Access), urgency tiers, and SLA response countdown timers.

Core Data Inputs: Ticket Reference ID, Subject, Customer Details, Department, Priority, Ticket Status.

Admin Capabilities: Assign tickets to support agents, reply via threaded chat, mark issues as resolved.

■ Direct Inquiries

</admin/enquiries>

B2B bulk purchase and brand partnership lead manager. Captures institutional quote requests, corporate bulk inquiries, and vendor onboarding messages submitted via the storefront.

Core Data Inputs: Company Name, Contact Person, Estimated Volume, Required Delivery Location, Message Text.

Admin Capabilities: Generate custom enterprise price quotes, convert inquiries to custom orders, archive leads.

SYSTEM & SETTINGS

GOVERNANCE, SECURITY & WEBHOOKS

■ Marketplace Settings

</admin/settings>

Global platform parameters and business configuration. Manages GST tax rates, default currency (INR ■), free shipping cart thresholds, maintenance mode switches, and SMS/Email SMTP gateway credentials.

Core Data Inputs: Platform Name, Support Contact Details, Payment Gateway API keys, Maintenance Mode Boolean.

Admin Capabilities: Update marketplace terms & policies, toggle maintenance mode, test email notifications.

■ Audit Logs

</admin/audit-logs>

Immutable security journal tracking all administrative operations. Records user logins, catalog price alterations, role updates, coupon creations, and database mutations with IP addresses and timestamps.

Core Data Inputs: Actor User ID, Action Type, Target Resource, IP Address, User Agent, Timestamp.

Admin Capabilities: Filter security events, audit unauthorized access attempts, export compliance logs.

■ Reports & Exports

</admin/reports>

High-performance data export suite. Generates downloadable CSV, Excel, and PDF reports for tax filings (GSTR-1, GSTR-3B), annual sales ledgers, inventory valuations, and delivery success metrics.

Core Data Inputs: Date Range Pickers, Report Categories (Tax/Sales/Logistics/Inventory), File Format (CSV/PDF).

Admin Capabilities: Download statutory compliance spreadsheets, schedule automated weekly financial exports.

■ Webhooks Monitor

</admin/webhooks>

Real-time external API integration stream. Monitors incoming and outgoing webhook payloads for payment gateways (Razorpay), courier tracking updates, and Clerk authentication sync with automatic retry queues.

Core Data Inputs: Webhook Event Name, Source Service, HTTP Response Status, Payload JSON, Latency (ms).

Admin Capabilities: Manually re-trigger failed webhook events, inspect raw payload JSON, verify webhook signatures.
