

KAIA TECHNOLOGIES PVT. LTD.

OFFICIAL PRODUCTION DELIVERY & SERVICE LOCATION MANUAL

Step-by-Step Guide: Real Data & PIN Code Configuration

Universal 10 KM Radius Geospatial Fulfillment System • Version 1.0 (Production Ready)

1. Business Requirement & 10 KM Architecture

KAIA Technologies operates on an authorized service radius model. Products are delivered exclusively within a 10 KM radius from fulfillment hubs configured by the Admin in the Admin Control Panel. No code changes or server deployments are required to add or update locations in production.

2. How to Add Real Delivery Locations (Admin Dashboard)

Step 1: Open Admin Delivery Management

Log in to your Admin account and navigate to "/admin/delivery-locations" (or click "Delivery Management" in the sidebar).

Step 2: Click "Add Service Location"

Click the "Add Service Location" button at the top right of the dashboard table.

Step 3: Fill in Location & City Information

Enter the Location Name (e.g. Bangalore - Indiranagar Hub), City (e.g. Bengaluru), State (e.g. Karnataka), and Complete Street Address.

Step 4: Enter PIN Code & Delivery Radius

Provide the 6-digit Indian PIN Code (e.g. 560038) and set the Delivery Radius in KM (Default: 10 KM).

Step 5: Provide Geographical Coordinates (Latitude & Longitude)

Enter exact Latitude (e.g. 12.9784) and Longitude (e.g. 77.6408). You can also click "Auto-detect My GPS" or use City Presets.

Step 6: Activate & Save

Ensure "Activate this location immediately" is checked and click "Add Location". The hub goes live instantly.

3. How to Find Coordinates for Any Location (Google Maps)

1. Open <https://maps.google.com> in your web browser.
2. Search for your warehouse, store, or fulfillment center address.
3. Right-Click directly on the map pin at your exact building or warehouse gate.
4. The top menu item will display two decimal numbers (e.g. "28.605672, 77.291784").
5. First number = Latitude (28.6056), Second number = Longitude (77.2917). Copy these into the Admin Modal.

4. Example Configurations for Major Indian Cities

City	Hub Name	PIN	Latitude, Longitude	Coverage (10 KM Radius)
Delhi	Mayur Vihar Hub	110091	28.6056, 77.2917	East Delhi, Noida border, Patparganj
Delhi	Connaught Place Hub	110001	28.6315, 77.2167	Central Delhi, Karol Bagh, Chanakyapuri
Noida	Sector 62 Tech Hub	201309	28.6280, 77.3649	Indirapuram, Vaishali, Sector 18, Expressway
Bangalore	Indiranagar Hub	560038	12.9784, 77.6408	Indiranagar, Koramangala, Domlur, MG Road
Bangalore	Electronic City Hub	560100	12.8399, 77.6770	Phase 1 & 2, Bommasandra, HSR Layout South
Mumbai	BKC Business Depot	400051	19.0657, 72.8687	Bandra, Kurla, Santacruz, Dadar

5. Real-Time Order Enforcement & Checkout Protection

- **Haversine Distance Engine:** When a buyer enters a PIN or uses GPS, the backend calculates real distance in KM from all active hubs using the Haversine great-circle formula.
- **Live Availability Badges:** If distance <= 10 KM: Shows green "Delivery Available" badge. If distance > 10 KM: Shows red "Delivery Not Available" badge with nearest hub distance.
- **Checkout Protection:** If a buyer tries to proceed to payment with an address outside the 10 KM radius, the Place Order button is disabled and the backend rejects order creation (400).
- **Order Audit Snapshot:** Every completed order stores a tamper-proof "deliveryValidation" record containing calculated distance, hub ID, and validation timestamp.
